

CUZZI D177A

Wall Mount LCD Arm w/VESA Compliant hole-pattern

Load capacity recommended: for LCD monitors up to 22lbs (10 kgs.)

Monitor Movement capabilities: tilt + swivel + rotate

1st Articulation: -base articulation- allows arm to **swivel** 180 degrees from left to right

2nd Articulation: -pre VESA plate- allows monitor plate to **swivel** 180 degrees from left to right

3rd Articulation: -VESA plate- allows the monitor to **tilt** 180 degrees up or down, so it can face the opposite wall or all the way to almost parallel to the ceiling or the floor.

The above movements are naturally limited by the shape & size of the monitor used.

The monitor also can be viewed in landscape or portrait mode due to the plate's **rotation capability**.

Adjustability: The torque on all articulations can be adjusted to achieve a tighter or smoother monitor adjustment or help lock in place.
